SOUDAFIX VE400-SF

Technical Data:

Base	Vinylester styrene free		
Consistency	Stable paste		
Curing system	Chemical reaction		
(1) Cartridge temperature = 15°C (2) Curing time on dry surface (20°C/65% R.H.) (x2 on wet surface)	Temperature ≥-10°C (1) ≥-5°C ≥0°C ≥5°C ≥10°C ≥20°C ≥30°C ≥35°C ≥40°C	Start 90 min 90 min 45 min 25 min 15 min 6 min 4 min 2 min 1,5 min	Full Cure (2) 24 u 14 u 7h 2 u 80 min 45 min 25 min 20 min 15 min
Specific Gravity	1,77 g/cm³		
Temperature Resistance	- 40°C to + 120°C		
Elasticity modulus	14000 N/mm²		
Maximum bending strength	15 N/mm²		
Maximum compression strength	100 N/mm²		

Product:
SOUDAFIX VE400-SF is a two-component anchoring resin for the pressure-free securing of threaded rods (ETA: M8-M30), studs, reinforcement bars (ETA: Ø8-Ø32), threaded collars, profiles etc in various solid and hollow materials, such as cracked and uncracked concrete, solid brick, hollow brick, porous concrete, natural stone (see remarks), plasterboard walls, etc…

Characeristics:
- Easy to use and to apply
- Fast cure
- Wide application area, even in wet drill holes, under water (ne sea water) and at temp. as low as –10°C
- Overhead installation allowed
- Styrene free (low odour)
- Cartridge re-usable by simply exchanging static mixer
- Watertight and impermeable fixing
- High chemical resistance
- Fire Resistance class F120 (M8-M30)
- European Technical Assessment ETA-10/0167 based on EAD 330499-00-0601 for application in cracked and uncracked concrete.
- European Technical Assessment ETA-12/0558 based on EAD 330087-00-0601 for application in post-installed rebar connections.
- Indoor air emission class A+

Application area:
Securing of heavy loads in solid and hollow building materials. Pressure free anchoring even close to edges. Can be used as repair mortar.

Packaging:
Colour: dark grey after mixing
Cartridge: 280 ml cartridge for standard skeleton gun, 380 ml for use with special two-component gun.

Shelf life:
18 months in original packaging. Store at cool and dry place at temperatures between +5°C en +25°C.

Substrates:
Type: All usual porous building substrates, poor adhesion on smooth non-porous materials.
State: Clean, free of dust and grease.

SOUDAFIX VE400-SF

Application:
Application method: standard skeleton gun for 280 ml cartridge, special 2 component gun for 380 ml, preferably heavy duty.
Application temperature: -10°C to +40°C
Clean:
Before cure: wipe off excess of product and clean afterwards with white spirit or acetone.
After cure: it is recommended to let the product fully cure, so that it can easily be removed mechanically with hammer and chisel.
Repair: with the same material

Safety recommendations:
Apply the usual industrial hygiene precautions.
Only use in well ventilated spaces.
Consult the label for more information.

Remarks:
There is a risk of staining on porous substrates such as natural stone. On such substrates a preliminary compatibility test is recommended.

Instructions for use:
- Drill hole at recommended depth
- Clean drill hole with brush and air pump thoroughly
- Screw static mixer onto cartridge
- Dispense the first 10 cm of the product to waste (on piece of cardboard) until an even colour (dark grey) is achieved, and the product is well mixed
- Solid stone: fill the drill hole from bottom up. Hollow brick: insert sleeve and fill it bottom up, so that the resin is pressed through the tiny holes of the sleeve
- Insert anchoring rod with twisting left-right motion
- Inspect the drill hole for adequate filling
- Observe hardening time. Don't move the anchoring rod during curing
- Leave the excess of product to cure as well. Remove it mechanically with hammer and chisel once cured
- Install component, applying the right torque

SOUDAFIX VE400-SF

Installation parameters threaded rods:

Diameter threaded rod	**d**	**mm**	**M8**	**M10**	**M12**	**M16**	**M20**	**M24**	**M27**	**M30**
Drill diameter	D_0	mm	10	12	14	18	24	28	32	35
